

LAICHMORAY

— HOTEL —

*Malt Whisky Lounge*

# Welcome to the Laichmoray

The Laichmoray Hotel started its life as the Great Northern Station Hotel and the Victorian building has been tastefully and continually upgraded without losing any of its character.

Warmth of atmosphere is the priority of the day at the Laichmoray for business guests and those wishing to relax and discover Moray alike. We offer personal attention and a professional service second to none.

## Malts at the Laichmoray

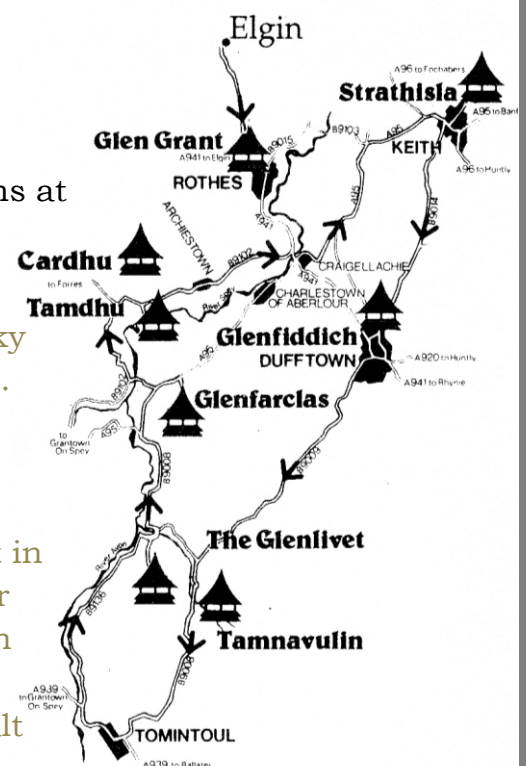

Open throughout the day and well into the evening the Laichmoray's Malt whisky Lounge is a calm and relaxing space to enjoy a dram at the end of a long day.

With over 130 malt whiskies for you to sample (not all at once..) we hope you find the perfect malt to suit your pallet! If you are having trouble finding that special malt then why not consult our bar staff who are on hand to part knowledge on the whiskies which we have in house.

## The Adventure begins

Here at the Hotel we believe the Malt Whisky trail begins at the Laichmoray and ends at the Laichmoray.

Situated in prime position, Elgin is an ideal pit stop for those daring to adventure along the famous Malt Whisky Trail encompassing eight distilleries and one cooperage. Each whisky distillery on the tour follows its own traditions, lore and recipes for everything from malting barley to the height and size of its stills. The unique characteristics of each Speyside whisky distillery result in delightful, hand-crafted whisky from each one. All offer visitors a sample of the finished product and include an informative nosing and tasting while others give an insight into the complex art of blending whisky and malt

# A brief history of Scotch Whisky

The Gaelic "usquebaugh", meaning "Water of Life", phonetically became "usky" and then "whisky" in English. However it is known, Scotch Whisky, Scotch or Whisky (as opposed to whiskey), it has captivated a global market.

Scotland has internationally protected the term "Scotch". For a whisky to be labelled Scotch it has to be produced in Scotland. If it is to be called Scotch, it cannot be produced in England, Wales, Ireland, America or anywhere else. Excellent whiskies are made by similar methods in other countries, notably Japan, but they cannot be called Scotches. They are most often referred to as "whiskey". While they might be splendid whiskies, they do not captivate the tastes of Scotland.

*"Eight bolls of malt to Friar John Cor wherewith to make aqua vitae"*

The entry above appeared in the Exchequer Rolls as long ago as 1494 and appears to be the earliest documented record of distilling in Scotland. This was sufficient to produce almost 1500 bottles, and it becomes clear that distilling was already a well-established practice.

The distilling process was originally applied to perfume, then to wine, and finally adapted to fermented mashes of cereals in countries where grapes were not plentiful. The spirit was universally termed aqua vitae ('water of life') and was commonly made in monasteries, and chiefly used for medicinal purposes, being prescribed for the preservation of health, the prolongation of life, and for the relief of colic, palsy and even smallpox. There were monastic distilleries in Ireland in the late-12th century.

The primitive equipment used at the time and the lack of scientific expertise meant that the spirit produced in those days was probably potent, and occasionally even harmful. During the course of the 15th century, along with better still design, the dissolution of the monasteries contributed to an improvement in the quality of the spirits produced. Many of the monks, driven from their sanctuaries, had no choice but to put their distilling skills to use. The knowledge of distilling then quickly spread to others.

The increasing popularity eventually attracted the attention of the Scottish parliament, which introduced the first taxes on malt and the end product in the latter part of the 17th century. Ever increasing rates of taxation were applied following The Act of Union with England in 1707, when England set out to tame the rebellious clans of Scotland. The distillers were driven underground.

A long and often bloody battle arose between the excisemen, or gaugers, as they were known, and the illicit distillers, for whom the excise laws were alien in both their language and their inhibiting intent. Smuggling became standard practice for some 150 years and there was no moral stigma attached to it. Ministers of the Kirk made storage space available under the pulpit, and the illicit spirit was, on

occasion, transported by coffin - any effective means was used to escape the watchful eyes of the Excise men.

Clandestine stills were cleverly organised and hidden in nooks and crannies of the heather-clad hills, and smugglers organised signaling systems from one hilltop to another whenever excise officers were seen to arrive in the vicinity. By the 1820s, despite the fact that as many as 14,000 illicit stills were being confiscated every year, more than half the whisky consumed in Scotland was being swallowed painlessly and with pleasure, without contributing a penny in duty.

This flouting of the law eventually prompted the Duke of Gordon, on whose extensive acres some of the finest illicit whisky in Scotland was being produced, to propose in the House of Lords that the Government should make it profitable to produce whisky legally.

In 1823 the Excise Act was passed, which sanctioned the distilling of whisky in return for a license fee of £10, and a set payment per gallon of proof spirit. Smuggling died out almost completely over the next ten years and, in fact, a great many of the present day distilleries stand on sites used by smugglers of old.

The Excise Act laid the foundations for the Scotch Whisky industry, as we know it today. However, two further developments put Scotch Whisky on firmly on the world map.

Until now, we have been talking about what we now know as Malt Whisky. But, in 1831 Aeneas Coffey invented the Coffey or Patent Still, which enabled a continuous process of distillation to take place. This led to the production of Grain Whisky, a different, less intense spirit than the Malt Whisky produced in the distinctive copper pot stills. The lighter flavored Grain Whisky, when blended with the more fiery malts, extended the appeal of Scotch Whisky to a considerably wider market.

The second major helping hand came unwittingly from France. By the 1880s, the phylloxera beetle had devastated the vineyards of France, and within a few years, wine and brandy had virtually disappeared from cellars everywhere. The Scots were quick to take advantage of the calamity, and by the time the French industry recovered, Scotch Whisky had replaced brandy as the preferred spirit of choice.

Since then Scotch Whisky has survived. It has survived Prohibition, wars and revolutions, economic depressions and recessions, to maintain its position today as the international spirit of choice, extending to more than 200 countries throughout the world.

. . . Enjoy!

# Malt Whisky Lounge collection

## Highland Malts

The Highland region includes most of Scotland above an imaginary line drawn from the Clyde estuary to the Tay estuary, with the exception of the Islands, and thus its malts vary greatly in character. Generalisations about the Highland region are less valid, as its whiskies will range from dry to sweet and some even have a touch of smoke and peat. The Speyside region is home to approximately half of Scotland's malt whisky distilleries. This small area of land located to the north west of Aberdeen produces mellow, sweet, and particularly fruity malt whiskies

## Lowland Malts

Lowland malts are dry, when compared with their Highland counterparts, and although often quite spirit are light whiskies with generally fewer individual differences than those of other regions

|              |             |       |        |
|--------------|-------------|-------|--------|
| Ailsa Bay    | 3 Year Old  | 48.9% | £6.50  |

| Talisker      | 10 Year Old | 45.8% | £5.50  |
| Tobermory     | 12 Year Old | 46.3% | £5.50  |

## Islay Malts

Islay malts have a smoky character derived from peat, considered a central characteristic of the Islay malts, and ascribed both to the water from which the whisky is made and to the peating levels of the barley. Many describe this as a “medicinal” flavour. They also possess notes of iodine, seaweed and salt. Caol Ila, on the northern side of the island, across from Jura, also produces a strongly peated whisky.

The Glencairn whisky glass is a style of glass developed by Glencairn Crystal Ltd, Scotland for drinking whisky. Originally designed by Raymond Davidson, managing director of the company, the shape of the glass is derived from the traditional *nosing copitas* used in whisky labs around Scotland. The glass design was concluded with the aid of master blenders from five of the largest whisky companies in Scotland. The glass first came into production in 2001.

Old Fashioned tumblers, snifters, and nosing copitas are other types of glasses that are commonly used for drinking whisky. The traditional style of whisky glass is a cut crystal Old Fashioned whisky tumbler, an iconic design that remains the most commonly used type of whisky glass. However, a tumbler does not hold and focus the aromas as much for the experience of the drinker as the Glencairn glass, which curves inwards towards the top of the glass. While not all drinkers may find the strong aroma produced by such glasses desirable, inward-curved glasses are often preferred by connoisseurs who consider the aroma especially important to the experience of a whisky.

## *Enjoy your malt at home*

Here at the Laichmoray Hotel we strive to make sure that your visit has been as relaxing as possible. As a souvenir we are now offering you the chance to have your own set of Laichmoray Hotel branded Glencairn nosing glasses.
